

# BIMINI TOP INSTALLATION GUIDE

Here are the main parts of bimini tops :

→ Stainless steel hook

→ Connecting tube

→ Tube ends

→ Bimini rings

→ Main Bow

→ Middle Bow

→ Front Bow

The basic steps to install your new bimini top is as follows:

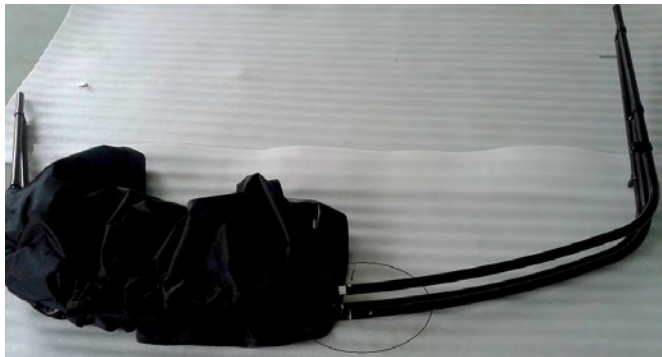

### Step #1: Assembling the bimini cover on the bimini bows

First assemble half of the bimini bows onto the cover as shown in the right picture ,

Note: The main bow and middle bow should be assembled as the follow picture,

then connect on the other half of bimini bow as follow ,

now you shall spread out the bimini cover as shown follow:

### Step #2: Find the desired position onto the tower

Now you need friends to help you to place the assembled bimini top under the tower you want to install ,as shown in the right picture

Please extend the bimini cover to fully position and mark the rough position on the tower bottom bar and tower rear leg where you would mount four bimini rings ,

Now you shall put aside the bimini top for a moment and mount the four bimini rings in according to the marks ,

Be sure that the cutted slot on tower bottom bar should be faced upwards ,  
at the mean time , be sure that the two mounting points are the same distance from either front or back .

This cutted slot should be faced upwards so that you can adjust the bimini top angle if necessary...

**Step #3:** Install the bimini top under the tower ,  
Now you shall pick up the bimini top and hold in place then connect it with the four mounted bimini rings simply,

after the bimini frame is in place , you need use a driller to drill on the end of main bow and two ends of connecting tube then fix it with rivetor .

the four bimini rings can be moved to change the bimini top position and angle that you need ,

the stainless steel hook is used to connect a strap if necessary for other different model tower like the right picture shown ,

The following picture showed the assembly of this bimini top .
